

# RECAPTURE THE YOUTHFUL LUMINESCENCE *of your skin*

## Combining the expertise and technologies of renowned physicians, **LUMINESCENCE™** advanced night repair

works while you sleep—when cellular renewal is most active—by enhancing the health of your skin's DNA. This powerful cosmeceutical is based on the most advanced clinical research available and is designed to enhance specific metabolic pathways involved in the aging process. LUMINESCENCE™ advanced night repair includes naturally derived ingredients that support your body's innate ability to repair your DNA on a cellular level.

During the normal aging process, your cells and the gel-like substance that lubricates between them lose hydration, causing your skin to become thin and dry. The growth of new skin cells slows down, creating a dull, sagging complexion, and telomeres, which protect your DNA from damage, become shortened. Daily routines expose you to free radicals, which can damage your skin cells.

LUMINESCENCE™ advanced night repair combines the latest in patent-pending stem cell technology to support natural self-renewal mechanisms and reduce the signs of aging while you sleep. This silky, soothing cream gives you the hydration you need to wake up with renewed and revitalized skin.
